

Solution features

- ❖ **Proactive prevention:** Prevent users from making changes to their applications, installing unauthorized software applications or manipulating the configuration of their computers

- ❖ **Multi-OS support:** Support discovery of network devices for Windows®, MacOS®, Linux® and VMware® workstations, servers, laptops, mobile machines and network devices (such as printers and scanners)

- ❖ **Remote security:** Remotely troubleshoot desktop issues while ensuring privacy during all remote sessions with encrypted communications, authenticated sessions and user confirmations prior to network connection

- ❖ **Device security:** Centrally control uploading and downloading activity from Bluetooth® devices, CD/DVD drives, FireWire devices, modems, wireless and USB devices.

- ❖ **Security at a glance:** Comprehensive reports and dashboards enable you to monitor compliance levels every step of the way. Templates are available that address key regulatory standards such as ISO 27001, ISO 27002, National Institute of Standards and Technology (NIST) and Microsoft hardening guides

FootPrints Security & Compliance

Numara® FootPrints® Security & Compliance is a part of the FootPrints family of IT Management products and solutions which streamline, automate and improve IT operations. It has been designed to leverage your legacy IT management solutions and enables IT to optimize the management of PC's, mobile devices, software and IT infrastructure by simplifying and automating the entire ownership experience. Our solutions uniquely integrate the processes that manage IT, not just the data generated by those processes.

Simplify and improve IT security

IT security and IT operations have a lot of the same goals in mind as both relate to managing PCs – consistent desktop configurations, automated deployment for system changes and desktop lockdown if needed. Having a single vendor to help you accomplish all of your desktop management and end-point protection strategies can help your organization decrease the overall cost and complexity associated with network stability and security.

Our solution...

One centralized and proactive solution helps prevent security weaknesses, enforces policy requirements and helps avoid costly fines. Trust FootPrints Security & Compliance Management Solution to help you reduce risk and maintain compliance with an easy, centralized way to detect vulnerabilities, set proactive measures and take action. Now that's simpler security.

The freedom to simply...detect and remediate vulnerabilities

Exposure to network vulnerabilities jeopardizes your organization's ability to have a secure and reliable network. Having the ability to assess exposure risk, detect weaknesses and then remediate known vulnerabilities helps organizations prevent unplanned service interruptions and enhance security across the network.

FootPrints Vulnerability Manager provides IT professionals with the knowledge and tools to take a more proactive approach to vulnerability, patch and configuration management, ultimately making your organization more secure at a minimal cost.

Key features:

- ❖ **Broad coverage:** Address a wide range of vulnerabilities, including abnormal usage, brute-force attacks, buffer overflow, misconfigurations and more

- ❖ **Impact assessment:** Assess the impact of vulnerabilities across the business by using trusted industry sources such as the Common Vulnerability Scoring System and Common Vulnerabilities and Exposures

- ❖ **Vulnerability detection:** Quickly scan any device with an IP address, specify groups of devices to automatically scan on a continual basis, assess vulnerable or non-secure configuration and automatically remediate those vulnerabilities.

The freedom to simply...prevent data leakage

Avoiding data leakage is a critical concern for most organizations. The risk of users transferring sensitive data on removable storage devices, whether malicious or not, can be detrimental not only to the organization's financial standings, but also to the company's reputation.

Organizations need to find a way to prevent this type of breach, as well as to ensure the rest of the network is secure and reliable.

By allowing you to define policies that specify which devices are enabled or disabled, as well as thresholds for PC inactivity, Numara FootPrints Device Manager ensures compliance and reduces the manual effort of managing or resolving issues caused by unsanctioned devices and unattended machines.

Key features:

- ❖ **Removable media device coverage:** Centrally control uploading and downloading activity from Bluetooth® devices, CD/DVD drives, FireWire devices, modems, wireless and USB devices
- ❖ **Enforce policy:** Prevent users from bringing illegal software, viruses and content into your network
- ❖ **Demonstrate compliance:** Secure sensitive or proprietary company information and comply with external regulations or internal policies regarding data storage and removal.

The freedom to simply...**deliver critical fixes**

Keeping up with the constant flood of security threats to your operating systems and software applications can be a full-time job. Leaving the security of your network up to the IT staff's ability to identify missing patches and deliver critical fixes across the entire organization is a time-consuming risk. Automated patch management is essential for organizations looking to safeguard their network from attacks and security breaches.

Numara FootPrints Patch Manager allows you to assess, schedule, deploy and report on patches across complex networks ensuring that your systems are secure and the integrity of your business is never compromised.

Key features:

- ❖ **One solution:** Manage, update and download all of your patch updates for Microsoft operating systems, Microsoft applications and selected third-party applications, such as Adobe, iTunes® and Mozilla Firefox®, installed across your network
- ❖ **View missing patches:** View a list of all the missing patches per device along with their severity level
- ❖ **Status tracker:** Monitor the patching process in real time and receive detailed information regarding any errors or anomalies so you can take immediate corrective measures
- ❖ **Wake-on-LAN:** Automatically distribute patches and other related maintenance tasks outside of business hours by waking PCs, deploying the patch and then closing machines down once the updates are complete.

The freedom to simply...**diagnose from afar**

Travelling from PC to PC fixing network and routine desktop issues is time-consuming for the individual desktop administrator, and it can prevent end-users from doing their jobs.

FootPrints Desktop Management products:

FP PatchManager

Centrally assess, manage, deploy and report on patches across diverse IT environments ensuring that your systems are secure and the integrity of your business is never compromised.

FP RemoteManager

Securely manage routine desktop management tasks as administrators are able to detect, diagnose and resolve PC issues without leaving their desk.

FP DeviceManager

Protect sensitive company data from being stolen or corrupted by prohibiting/restricting the use of certain removable media devices and enforcing standards in accordance with company policy.

FP VulnerabilityManager

Assess exposure risk, detect weaknesses and then remediate known vulnerabilities such as abnormal usage, buffer overflow, misconfigurations and so on, and prevent unplanned service interruptions and enhance security across the network.

FP InventoryManager

Automate complex inventory tracking and receive accurate, current and complete asset intelligence to help guide investment decisions, reduce manual processes and maintain compliance.

FP ComplianceManager

Reduce the hassle of monitoring IT assets and defining policies and provide auditors with records of compliance levels from a centralized console.

The ability to troubleshoot and diagnose desktop issues without physically visiting each workstation is crucial for optimizing IT resources and keeping end-users happy and productive.

The Numara FootPrints Remote Manager extends the reach of IT support by quickly and accurately assessing and fixing end-users' desktop issues, including tracking asset inventory and deploying software and patches without physically leaving your desk.

Key features:

- Secure, remote support:** Securely manage users' PCs from afar with authenticated sessions and encrypted communications and maintain a central audit file of all remote control sessions in case of an investigation
- Direct access:** Allow administrators to access the Windows Registry Editor®, Windows Service Manager®, Windows Task Manager® and Windows Event Manager®, and the file system on Windows, MacOS®, Linux® and UNIX® operating systems for adjustments or troubleshooting after hours
- Service anywhere:** Allow administrators to access a machine through a secure tunnel without the use of a VPN to perform various desktop management related tasks such as inventory, patch management and software distribution.

The freedom to simply...track and report on IT assets

Every IT security plan needs to include the tedious task of tracking IT assets. Having a list of all hardware and software assets, knowing what software is installed, whether or not it is being used, the frequency of its usage as well as knowing if it is compliant with your vendor licensing agreements or internal security policies are just a few of the key elements in establishing a compliant network.

Numara FootPrints Inventory Manager and Numara FootPrints Compliance Manager automate complex asset tracking and reporting, and provides accurate, up-to-date asset intelligence, ensuring that your organization adheres to compliance mandates while avoiding the painstaking task of manually tracking asset inventory saving time, money and fines for being non-compliant.

Key features:

- Comprehensive reporting:** Monitor compliance levels with comprehensive reports and dashboards. Templates are available that address key regulatory standards such as ISO 27001, ISO 27002, National Institute of Standards and Technology (NIST) and Microsoft hardening guides
- Dynamic groups:** Quickly identify, group and remediate those devices that do not adhere to defined compliance policies
- Audit now:** Avoid costly fines and penalties associated with copyright infringements with advanced software license management capabilities.
